A LETTER to Our SHAREHOLDERS

Fiscal 2010 was a challenging year for Key, primarily due to the difficulty in forecasting our customers’ response to the economic environment. In light of this uncertainty, we reduced our operating spending by controlling costs in every aspect of the business. As a result of these actions, we are pleased to report that the Company ended the year profitably.

OUR 2010 ACHIEVEMENTS

We delivered improved performance. | Net earnings in fiscal 2010 improved by $4.1 million compared to 2009. Our orders were up by 19 percent over the previous year and revenues increased by over 9 percent. Our cash flow was positive by nearly $11 million, our operating income was positive by over $5 million, and our year-end backlog was an all-time end-of-year record of more than $35 million.

We can credit a large part of these results to the many new products that we introduced in 2009. For example, in fiscal 2010 we shipped a significant number of Manta® 1600 sorters to vegetable and potato processors and sold several VeriSym® sorters into the pharmaceutical industry. We also won numerous Online Training contracts, and our FMAler™ software is becoming the standard for multinational customers in their worldwide locations.

We lowered our costs. | In 2008, our annual Operating Expenses were $43 million. In 2009, we reduced Operating Expenses to just under $40 million, and in fiscal 2010, we further reduced them to $35 million. The effect of these reductions was spread across the Company, with research and development expenses down by $2 million and general and administrative expenses down by more than $2.3 million.

While reducing Operating Expenses received significant management attention in 2010, we also launched programs to reduce our Cost of Sales and maximize product uptime for our customers. We focused engineering resources on redesigning for manufacturing efficiencies, improved reliance and in-field diagnostic capabilities, and reduced material and component cost by developing new vendor-sourcing strategies.

We delivered new product solutions. | In 2009, we delivered 17 new product solutions to the marketplace. Even with an increased focus on lowering costs and re-designing for efficiencies, we still delivered six new product solutions in 2010. These included:

• The Manta 1630.
• A redesigned Compact Dryer for the fresh-cut market.
• An additional Online Training module for our ADR® product line.
• The VeriSym SL sorter for low-volume pharmaceutical processors.

The vegetables on your plate. The fruit in your bowl. The pill in your palm. You cook, slice or swallow them with confidence, and your peace of mind owes much to the contributions of Key Technology.

With products at work on six continents, Key Technology helps food and pharmaceutical processors make the products we consume safer, purer and better. Through more than six decades of innovation, the Company has introduced scores of technological advancements—holding 53 current patents and launching six sophisticated new solutions this year alone.
As the world’s leader in food processing technologies, we see new opportunities for inspection that begin in the field where products are harvested and end where products are sealed and packaged for consumers—from field to fork.

• Several special-use application software packages.
• The onCore® system that has become the product of choice for fresh-cut processors to remove core from romaine and iceberg lettuce.

During 2010, our research and development team also completed preliminary development for a large number of new product solutions strategically planned for release in 2011.

We solicited feedback from our customers. To ensure that we continue to meet the expectations of our customers, we conducted a global customer survey in 2010. We found that Key continues to earn high marks from our customers for our dedicated commitment to supporting their needs. The survey revealed an increased demand for training and an increasing reliance on Key’s in-plant service offerings as customers reduce their internal maintenance staff in response to the current soft economy. We are responding to these trends with more focus on customer training and service products.

The survey results also confirmed our conviction that international customers want a local presence. As we enter new geographic markets, we plan to continue to position our sales and service network in these regions to be near our customers.

We strengthened our strategic partnerships and alliances. In the pharmaceutical and nutraceutical industries, we established a cross-selling agreement with Proditec, the inspection-system manufacturing company in which Key retains a 15 percent ownership. This agreement enables us to leverage the sales and distribution channel strengths of both companies.

We continue to grow the original equipment manufacturer (OEM) alliance with Hauni, our marketing and sales partner in the tobacco industry. As the exclusive supplier of optical sorters to Hauni, we co-developed AeroSort™, an innovative foreign-material-detection and material-handling system, employing a novel conveying method that delivers sorting performance never before achieved.
And, our strategic manufacturing partnership with Pymesa continues to aid in the development of Key’s presence in the fresh produce market in Mexico and other fruit and vegetable markets in Latin America.

**We adjusted to a changing marketplace.** In response to a growing customer need to provide whole-line solutions, we formed an Integrated Solutions Group that will design complete production lines, incorporating equipment from both Key and other suppliers. This concept has already met with very positive customer response, particularly in geographies that do not have deep food processing expertise.

In addition, to strengthen our position in Latin America, Australia, New Zealand, and Eastern Asia, we have added an InterContinental Region Sales manager focused on leading our international sales team to respond more rapidly to our customers in these growing markets.

**We added new elements to our strategy.** For many years, Key was almost entirely focused on food, tobacco and pharmaceutical processors in North America and Western Europe. In these regions, market needs are directed toward improvements in food safety, quality, productivity, yield and sustainability—areas where Key is very well-positioned and successful. We will unabatedly continue to respond to the needs of these markets.

In addition, we are increasing our emphasis on fresh produce, fruit and vegetable, and potato markets in emerging marketplaces. The needs of these markets are directed toward labor reduction, lower-volume and lower-cost products, and whole-line solutions. They also rely heavily on the process expertise of their equipment suppliers. Because some of our existing products will not be competitive in these new geographies, we must expand our product lines to include offerings that are simplified for the user, sophisticated and robust in operation and, most importantly, appropriately priced and specifically designed for these markets. We have allocated additional resources to meet the needs of these markets and believe this strategy will allow us to rapidly and successfully penetrate these emerging markets, resulting in potential revenue growth.

Beyond these strategies, we are taking a fresh look at Key’s role in the food industry. We have come to realize that the earlier in the food preparation process we can remove contaminants or poor-quality product, the more effectively we can help to reduce waste, increase yield, and improve the quality of foods offered on the grocer’s shelves. With this broadened view, we see new opportunities for inspection that begin in the field where products are harvested and end where products are sealed and packaged for consumers—from field to fork. Our future strategy will include development of products for these new opportunities.
The demand for purer, safer and fresher products continues to grow. Our opportunity horizon is wide open.

**OUR 2011 STRATEGY**

The economic downturn that began to impact Key in the first quarter of fiscal 2009 continued to affect our business throughout 2010. It forced Key to make difficult decisions that have made the Company leaner, faster and more focused—but we must become *even better*. We must:

- Get products to our marketplaces more rapidly and with improved capabilities and diagnostics.
- Reduce our costs by designing robust products that can be efficiently produced.
- Use our cash to make strategic and tactical investments that improve shareholder value and support our strategic plan.

More than just getting a product solution to market, these goals require efficient processes that keep our costs down, compress our delivery schedules, and delight our customers.

Net earnings and orders grew substantially, and backlog hit record levels.

OUR 2011 GOALS

Our primary objective for 2011 is to provide excellent returns to our shareholders, obtained through a clear vision, crisp strategy, detailed tactical execution, accountability, and respect for our customers. We will accomplish this by achieving specific goals.

Our goals in our core markets are to:

• Invest in software products and equipment diagnostics that address regulatory and food/pharmaceutical safety requirements.
• Continue to launch new optical upgrades that extend the lives of our installed base and minimize the cost of ownership for our customers.
• Staff and support our Integrated Solutions Group with project management and OEM relationships.
• Develop new aftermarket offerings that deliver value and optimized system performance for our customers.

Our goals in our emerging markets are to:

• Offer new optical products that meet the specific needs of targeted emerging markets.
• Use our Integrated Solutions Group to offer complete process solutions, including training and extensive process expertise.
• Assemble products in-country, where possible, to reduce import and product costs and to increase “local” content.

In addition, we plan to:

• Continue to develop and strengthen our relationship with Proditec and invest in new products as pharmaceutical market requirements change due to increasing regulation.
• Support our Hauni alliance with investment in tobacco-processing product development.
• Continue development of OEM relationships that increase revenue from existing products by expanding into new market channels.
• Evaluate investments that open new market channels or add to Key’s vault of available technologies.

The demand for purer, safer and fresher products continues to increase. As a world leader in food and pharmaceutical processing technologies, our opportunity horizon is wide open. With the support of our shareholders, customers and employees, we enthusiastically head into the challenges and opportunities of 2011.

David M. Camp
President and CEO
With clear vision, crisp strategy and detailed tactical execution, we will achieve our primary objective for 2011—excellent returns to our shareholders.
